PROFILE

Full-stack software engineer with 2+ years of experience building and maintaining production systems using Python, Django, PostgreSQL, Redis, Next.js, and Vue.js. I design and deliver features across backend and frontend, with a strong focus on secure system design, relational database modeling, and scalable APIs. I have contributed to production platforms where performance, data integrity, and reliability were critical. I take ownership of my work and write clean, maintainable code to deliver secure and dependable systems.

WORK EXPERIENCE

REPLIQ Limited 12/2022 – 02/2025 | Dhaka, Bangladesh

Software Developer

- Led backend development for ProHR and HealthOS, designing scalable REST APIs, relational database schemas, and backend architecture using Django, PostgreSQL, and Redis
- Improved performance by 50–70% through PostgreSQL tuning, indexing, Redis caching, and Elasticsearch, supporting systems handling 100k+ requests per minute
- Implemented secure RBAC, Celery background jobs, and Docker-based deployments to ensure reliability, scalability, and secure access control
- Delivered production features end-to-end with clean architecture, consistent API standards, and reliable system behavior
- Strengthened engineering quality and team delivery through code reviews, documentation, Git workflows and weekly sprint planning
- Collaborated with frontend (Next.js), ensured server security, and maintained testing environments.

TOP PROJECTS

ProHR – AI-Assisted Recruitment Platform 01/2023 – 12/2024

Backend Technical Lead

- Built core backend systems from scratch, including software architecture, REST APIs, database schema, and workflow logic
- Developed AI-assisted interview system enabling automated question delivery, recording candidate responses, and storing results for structured evaluation by HR and reviewers
- Coordinated weekly sprint planning, feature delivery, and client feedback sessions to ensure timely releases and alignment with product requirements
- Improved system performance and scalability through PostgreSQL query optimization and Redis caching, resulting in faster and more reliable response times
- Established API standards and documentation, and managed GitHub workflows including pull request reviews and main branch merges to ensure code quality and development consistency

HealthOS – B2B Pharmaceutical Ordering & Delivery System 05/2023 – 03/2025

Backend Engineer – Order System Redesign

- Redesigned the core order management system, including database schema and backend architecture, improving order response time by ~70%
- Migrated and synchronized 40M+ legacy order records to the new system, ensuring data integrity and uninterrupted production operation
- Integrated Elasticsearch for fast and scalable order search, significantly improving retrieval performance and user experience

SKILLS

Backend Technology (Python)
Django, DRF, FastAPI

DevOps & Tools
Docker, Celery, Git, WebSocket, JWT

Frontend Technology
ReactJS, NextJS, Tailwind CSS

Others
REST APIs, AI Feature Integration, Agile, Tortoise ORM

Database
PostgreSQL, Redis, Elasticsearch

EDUCATION

Artificial Intelligence and Data Analytics 10/2025 | Ulm, Germany
Hochschule Neu-ulm

LANGUAGES

English
Fluent

German
A1

AWARDS

Employee of the Month (x2) and Team of the Month (2024)
REPLIQ Limited

ORGANIZATIONS

BUBT National Programming Camp 10/2017 | Dhaka, Bangladesh
Volunteer
